Embraco to Boost Focus on Condensing Units in North America

Originally published: 07.25.13 by HVACR Business Staff

SUWANEE, GA – Embraco, a company specializing in cooling solutions, and a global leader in the hermetic compressor market, is amplifying their focus on condensing units in North America.

The newly offered condensing units are assembled with cutting edge technology and off-the-shelf parts to enhance OEM competitiveness. Embraco has an exclusive production line for heat exchangers, which allows for greater flexibility in developing solutions for manufacturers.

“We’re excited to roll out our enhanced condensing units in North America,” said Doug Schmidt, Commercial Cooling Solutions sales manager at Embraco North America. “We look forward to working with our customers to co-develop condensing units that meet their special needs.”

Embraco’s production line is fully equipped with key testing equipment such as leak detectors and electrical safety tests to guarantee high quality products. Furthermore, Embraco has in place a dedicated team to provide customer service in the areas of sales, R&D, quality assistance and technical support for their North American customers.

For nearly 20 years, Embraco has been producing condensing units in many parts of the world distributing to 46 countries and serving more than 80 customers.
