## ABOUT NIDEC GLOBAL APPLIANCE

### A global partner for home and commercial appliances industries

With over 15,000 employees across 9 countries, Nidec Global Appliance manufactures and commercializes products for home and commercial applications, including refrigeration solutions, motors for washing machines, dryers and dishwashers, as well as components for heating, ventilation and air-conditioning systems (HVAC). The division is part of Nidec Corporation, a global leader in motors and components for a wide variety of industries, with headquarters in Japan.

The business division manufactures and commercializes **Embraco's cooling systems and compressors for a variety of refrigeration equipment.**

Your **global partner** in refrigeration since 1971

#### Home Appliances

Products for residential freezers, refrigerators and mini-fridges.

#### Commercial Appliances

Compressors and cooling solutions for commercial applications, such as bottle coolers, chest freezers, reach-ins, ice machines, medical refrigerators etc.

#### Aftermarket

Parts distribution, replacement and retail focused on retail owners, installers and contractors.

Since 1971, EMBRACO provides cooling solutions for home and commercial applications attending customers' most challenging demands. The portfolio brand has been counting on a broad, efficient and competitive portfolio for food service, food retail, merchandisers and special applications. A pioneer in fostering the early development of variable speed and the use of natural refrigerants in cooling solutions, Embraco continues to deliver innovation that exceeds the market's most challenging demands, anticipating trends.

# 02 OUR PRODUCTS

Compressor families and their main applications:

## FIXED SPEED COMPRESSOR

**EM:** Bottle coolers, ice cream freezers, household replacement, water coolers and vending machines Up to 1/2 HP.

**EG:** Household replacement and light commercial applications. Horizontal freezers, Reach ins, Vending machines. Up to 1/3+ HP

**F:** light commercial applications. Horizontal freezers, Reach ins, Vending machines. Up to 1/2 HP

**NE:** Frozen food islands, Professional kitchen upright Coolers and Freezers, display cases, Ultra low temperature freezers. 1/2 to 1 HP.

**NJ:** Air curtain reach ins, Ice machines, Cold rooms, blast chillers. 1 to 2 HP.

**NT:** Professional kitchens upright coolers and freezers, Air curtain reach ins, beer dispensers, Ice machines, Cold Room, Ultra low temperature freezers. 3/4 to 1 1/2 HP

## VARIABLE SPEED COMPRESSORS

**VEM:** Refrigerators and Freezers, Wine cooler, Beverage coolers, Chest freezer, Medical cooler. Up to 1/4 Hp.

**VEG:** Refrigerators and Freezers, Wine cooler, Beverage coolers, Chest freezer, Medical cooler. Up to 1/3+ Hp.

**VES:** Refrigerators and Freezers, Wine cooler, Beverage coolers, Chest freezer, Medical cooler. Up to 1/3+ Hp.

**FMX:** Refrigerators and Freezers, Wine cooler, Beverage coolers, Chest freezer, Medical cooler. Up to 1/4 Hp.

**FMF:** Upright reach ins, Beer dispenser, Frozen food Islands, Ultra low temperature freezers. Up to 1 Hp

## TECHNICAL INFORMATION

### MOTOR TORQUE

<b>LST</b>	<p>LOW STARTING TORQUE</p> <p>Compressor with <b>RSIR-RSCR-PSC electrical motor</b> for systems with capillary tube and with equalized pressures at start up.</p>
<b>HST</b>	<p>HIGH STARTING TORQUE</p> <p>Compressor with <b>CSIR-CSR and 3ph electrical motor</b> for systems with equalized or not equalized pressures at start up.</p>

### APPLICATIONS

		EVAPORATION TEMPERATURE °C	APPLICATIONS
<i>LBP</i>	<b>LOW BACK PRESSURE</b>	Between -35 and -10	household Refrigerators, frozen food islands, ice cream freezers
<i>MBP</i>	<b>MEDIUM BACK PRESSURE</b>	Between -15 and 0	Displays cases, reach in coolers, bottle coolers
<i>HBP</i>	<b>HIGH BACK PRESSURE</b>	Between 0 and 15	Refrigerated wine houses, Water coolers, air dehumidifiers

### TEST CONDITIONS

TEST CONDITIONS	APPLICATIONS	EVAPORATION TEMPERATURE °C / °F	CONDENSING TEMPERATURE °C / °F	GAS RETURN TEMPERATURE °C / °F	SUBCOOLING °C	AMBIENT TEMPERATURE °C / °F
ASHRAE	LBP	-23.3 / 10	54.4 / 130	32.2 / 90	22.2	32.2 / 90
	M/HBP	7.2 / 45	54.4 / 130	35 / 95	8.3	35 / 95
ARI	LBP	-23.3 / -9.94	48.9 / 120.02	4.4 / 39.92	0	35 / 95
	MBP	-6.7 / 19.94	48.9 / 120.02	4.4 / 39.92	0	35 / 95
	HBP	7.2 / 44.96	54.4 / 129.92	18.3 / 64.94	8.3	35 / 95

### COOLING TYPE

<b>STATIC</b>	Compressor approved for static cooling not requiring a fan motor on the condenser side.
<b>FAN</b>	Compressor approved for fan cooling requiring forced cooling with a fan motor on the condenser side.
<b>STATIC/FAN (S/F)</b>	Compressor approved for static and fan cooling which may or may not apply a fan motor on the condenser side.

## BLENDERS APPROVED BY EMBRACO REPLACING R12

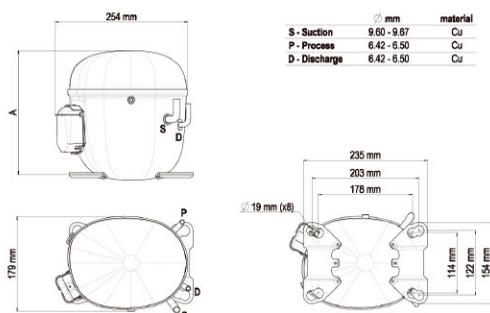

REFRIGERANTES	
ASHRAE	Nome comercial
R-401a	SUVA® MP39
R-401b	SUVA® MP66
R-409b	FORANE® FX56
R-413a	ISCEON 49

Embraco already approved R452A for NEU, NT, NJ compressor series as an alternative refrigerant for both LBP (low back pressure) and MBP (medium back pressure) applications maintaining the original R404A operating envelope. Embraco approves R449A and R448A as an alternative refrigerant for Embraco R404A compressor series NEU, NT, NJ only for MBP application with limited operating envelope as below.

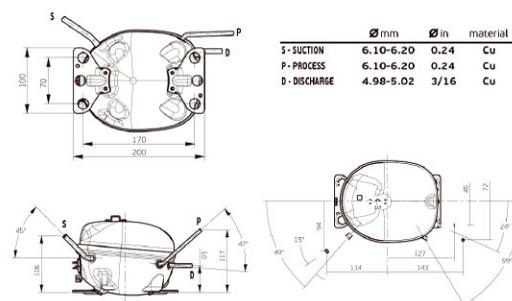

UNITS CONVERSION TABLE			
	1 BTU	1 W	1 kcal/h
1 BTU	-	0,293	0,252
1 W	3,412	-	0,86
1 kcal/h	3,966	1,162	-

# COMPRESSOR PACKAGING

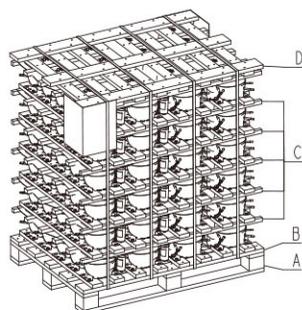

## MULTIPLE PACKAGING

This type of package consists of a shipping skid of 835 mm x 1150 mm on which are positioned the elements composing the packaging of various compressor layers, as listed below, secured with straps to the shipping skid

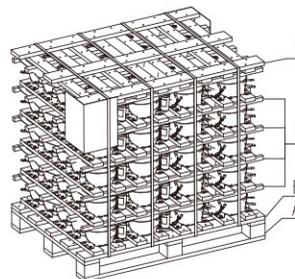

### *Pallet packages composition*

A	SHIPPING SKID	on which the base is positioned
B	BASE	on which the first layer of compressors is positioned
C	SEPARATOR SKID	are positioned between layers, in quantities according to the compressor series
D	TOP SKID	upper element closing of the package

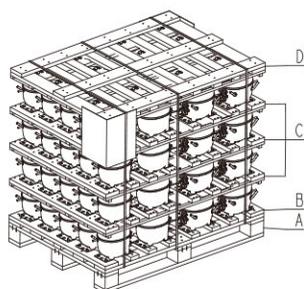

**"EM" (120 compressors)**

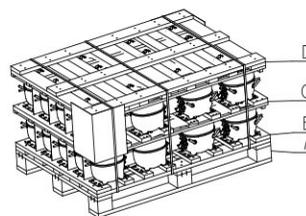

**"EM" (100/88 compressors)**

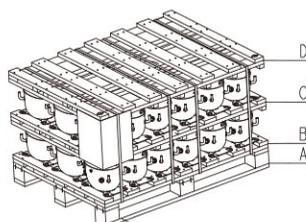

**"NE" (80/74 compressors)**

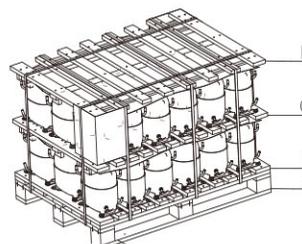

**"NE" (40/37/28 compressors)**

**"NT" (36/24 compressors)**

**"NJ" (36/28 compressors)**

## SINGLE PACKAGING

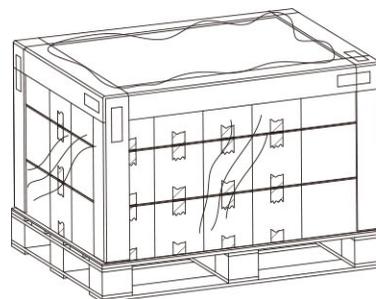

This type of package consists of a carton box and an internal separator to prevent any compressor movement. The electrical components and accessories are included in the package (assembled or attached).

Complete pallet package consists of a shipping skid of 830 mm x 1130 mm on which are placed carton boxes with compressors secured with corner strip and straps. Number of layers depends on compressor families.

*Carton box for single package*

*Single compressor pallet package*

## Characteristics of complete single package

SERIES	QUANTITY PER PALLET	CODE	PACKAGING TYPE	ELECTRICAL COMPONENTS	NOTE
EM	70	A	5 layers of 14 compressors	ASSEMBLED	
EM	56	J	4 layers of 14 compressors	ASSEMBLED	
NE	56	A	4 layers of 14 compressors	NOT ASSEMBLED / ASSEMBLED	
NE	56	J	4 layers of 14 compressors	ASSEMBLED	
NE	44	F	4 layers of 11 compressors	NOT ASSEMBLED / ASSEMBLED	CSR electrical box included
NT	44	A	4 layers of 11 compressors	NOT ASSEMBLED / ASSEMBLED	
NT	44	F	4 layers of 11 compressors	NOT ASSEMBLED / ASSEMBLED	CSR electrical box included
NJ	33	A	3 layers of 11 compressors	NOT ASSEMBLED	
NJ	33	F	3 layers of 11 compressors	ASSEMBLED	CSR electrical box included

Wooden packaging and pallets are created to comply with recycling regulations and are treated according to standard ISPM No. 15 - Regulation of wood packaging material in international trade. IPPC mark is presented on the wooden palets.

## PACKAGE FOR ELECTRICAL COMPONENTS AND ACCESSORIES

Electrical components and accessories if not assembled on compressors are packed separately in carton boxes. A label is applied showing the following data:

### Components packing label

1. Components bill of material code  
(complete of electrical components and accessories)
2. Compressor model
3. Quantity
4. Customer name (optional)
5. List of electrical components and accessories shipped  
(code/description/quantity)

## COMPRESSOR IDENTIFICATION MARKS

Labels are applied on two sides of each package and report the following data:

1. Compressor bill of material
2. Bar code of compressor bill of material (Type 39)
3. Compressor model
4. Voltage & frequency
5. Refrigerant
6. Package quantity (optional)
7. Packaging serial number
8. Bar code of packaging serial number (Type 128)

## VARIABLE SPEED COMPRESSORS

Embraco variable speed compressors are a solution for residential and commercial applications which demand fast cooling, low energy consumption, operate with a low starting voltage and with a wide operating range, low noise and vibration levels. The variable speed compressor associated with an inverter allows the compressor run in different RPM, delivering the cooling capacity needed according to the thermal load.

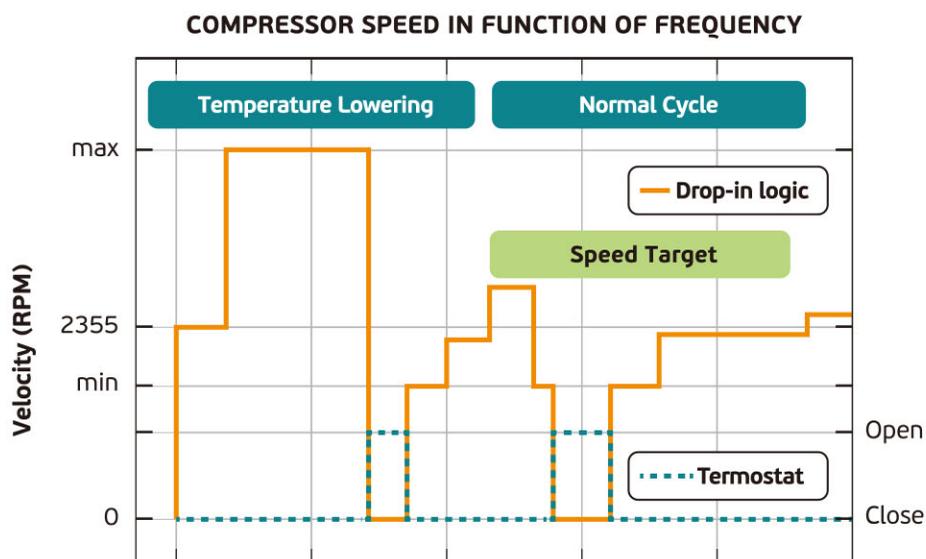

### CONTROL MODES

#### DROP-IN

The Drop-In mode is a CF05D inverter control mode, where single thermostat contact is used to set the compressor running conditions. Drop-In mode allows the application to any refrigeration system with a simple ON/OFF thermostat, without the need of a rotation control signal through serial or frequency communication. The compressor speed will be adjusted automatically by the inverter, in accordance to the thermal load variation.

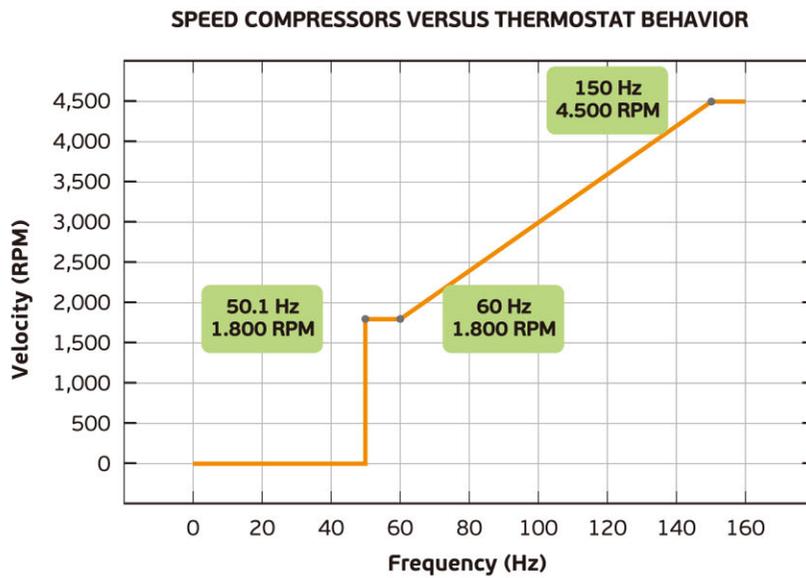

#### SMART DROP-IN

The Smart Drop-In was designed with focus on cooling capacity, but always considering good system efficiency. This solution provides a customization tool that allows the routine to be parameterized and adjusted for each refrigeration system. The logic is divided in four main parts: Pull-down, Stability Routine, Heavy Duty Routine and Defrost Routine. The Stability, Heavy Duty and Defrost Routine begin to run in parallel after Pull-down is completed.

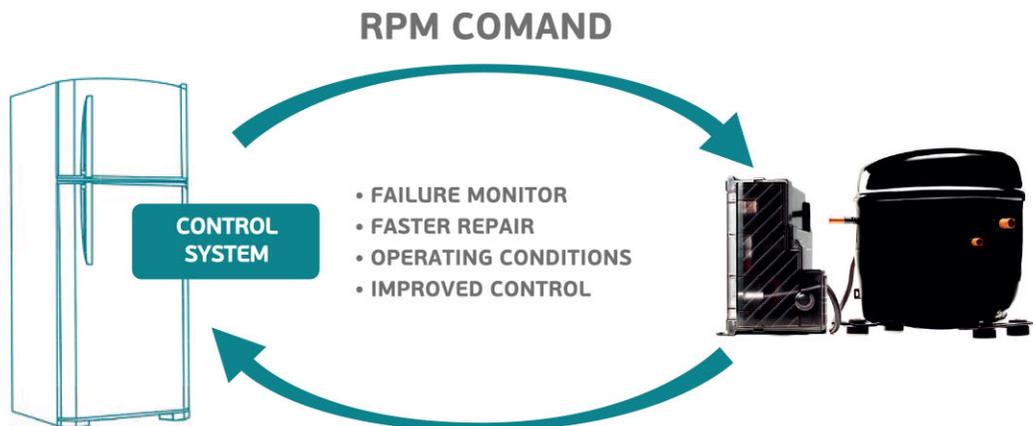

# FREQUENCY

In this communication mode, the compressor's speed is controlled by a frequency signal sent to the inverter, usually generated by an electronic controller. This frequency signal is a digital wave that varies between 53 and 150 Hz. The compressor is then driven by this signal sent to the inverter

# SERIAL

This option is used associated with an electronic thermostat, in which the inverter uses a serial communication protocol, building a communication bridge between the inverter and the controller. Based on Embraco protocol it is possible to define the compressor speed and check other parameters such as compressor RPM and failure state. This response from the inverter can be used to help diagnose system failure and/or fix it in less time than usual.

# OPERATING ENVELOPE

EMC, EMX, NE, NT, NJ, VNE

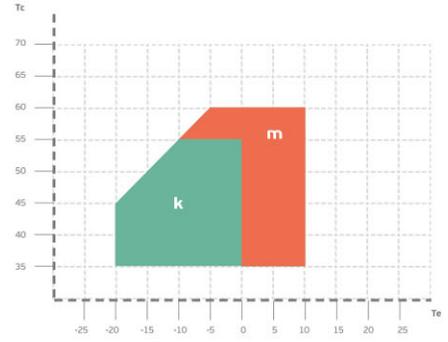

**LBP**  
R134a - R600a

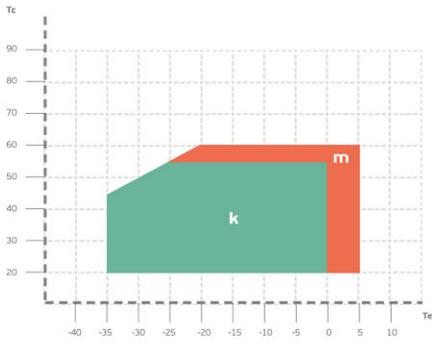

**LBP**  
R404A/R507/R452A - R290

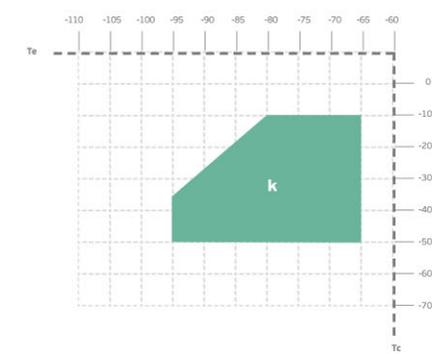

**MBP**  
R404A/R507/R452A - R290

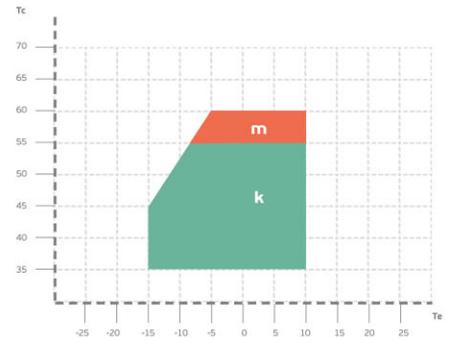

**L/MBP**  
R290

**ULBP**  
R508B/R170 - second stage of cascade

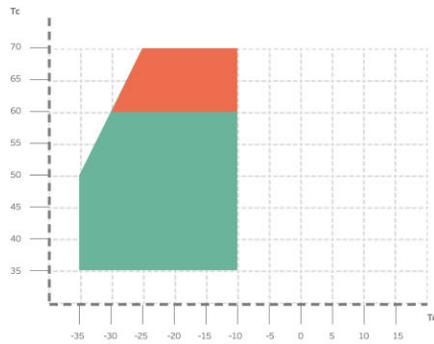

**HBP**  
R134a - R600a

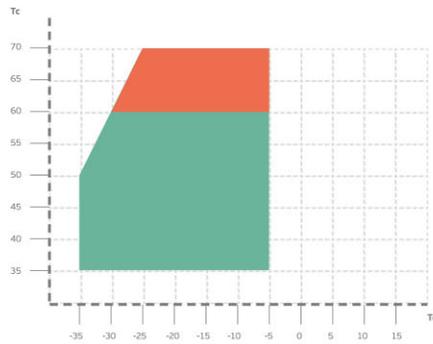

## EM, EG, F, VEM, VEG, VES

Ambient temperature: 42,7 °C - Return temperature: 32,2 °C

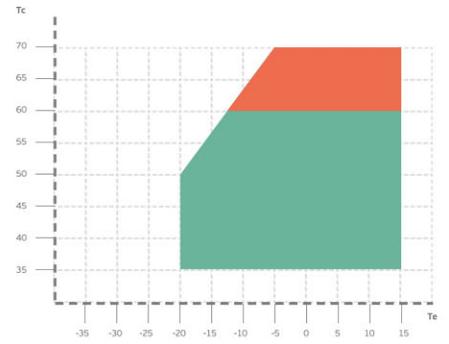

**LBP**  
R290 - R134a - R600a

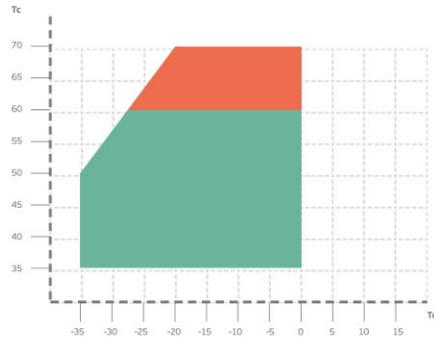

**L-MBP (STANDARD)**  
R290 - R134a

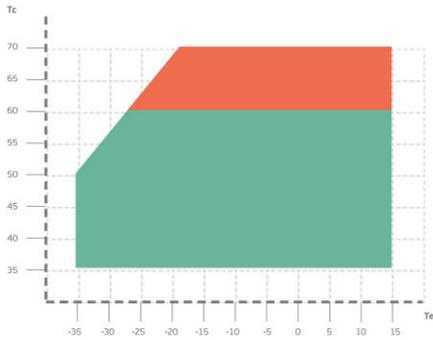

**M-HBP**  
R134a

**L-MBP EXTENDED RANGE FFUS, EM2, EM3**  
R290 - R134a - R600a

**L-M-HBP**  
R134a

■ Operation Condition  
■ Transient Condition

**Tc** Condensing Temperature  
**k** Ambient 32°C and return gas 20°C  
**Te** Evaporating Temperature  
**m** Ambient 32°C and return gas 20°C (for transitory period)

**NOTE:** usage of compressors outside the intended working range cannot make use of the warranty, or should be consulted with Technical support.

## VOLTAGE:

Check what is the inverter voltage specified on the label, as seen below: The inverter must be replaced by an equivalent one with the same voltage range.

## CONTROL SIGNAL:

Check which control signal is used in the original inverter. You can find it on the inverter label below and check the available list on pages 08 to 15 which control signal.

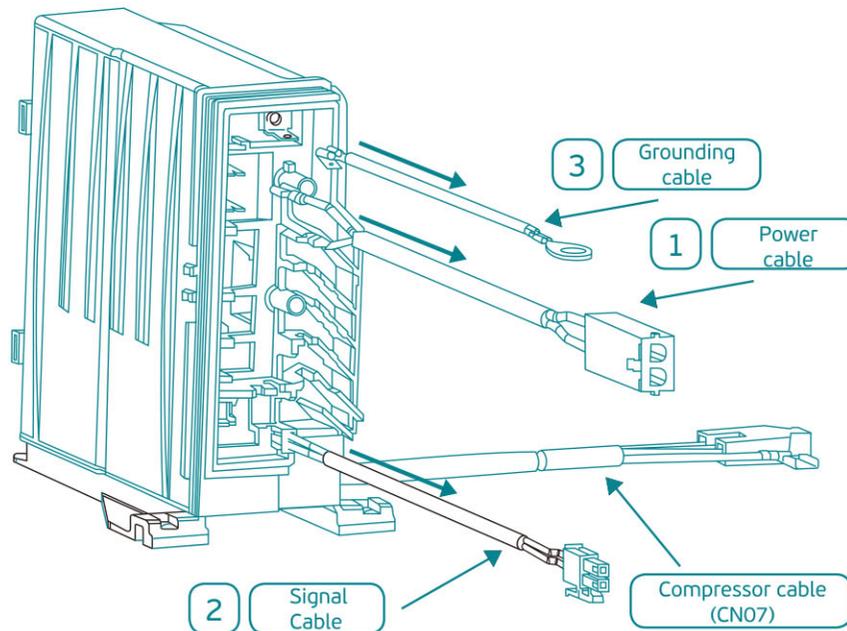

The inverter must be replaced by another one with the same voltage range

APPLICATION	TORQUE	MOTOR TYPE	EXPANSION DEVICE	LUBRICANT		WEIGHT	TEST CONDITION	INVERTER
				OIL CHARGE	TYPE / VISCOSITY	KG		
LBP	HST	BPM	Capillary Tube or Expansion Valve	500	ESTER / ISO22	11,6	ASHRAELBP32	VCCH-P2456XXXX
LBP	HST	BPM	Capillary Tube or Expansion Valve	500	ESTER / ISO22	11,6	ASHRAELBP32	VCCH-P2456XXXX

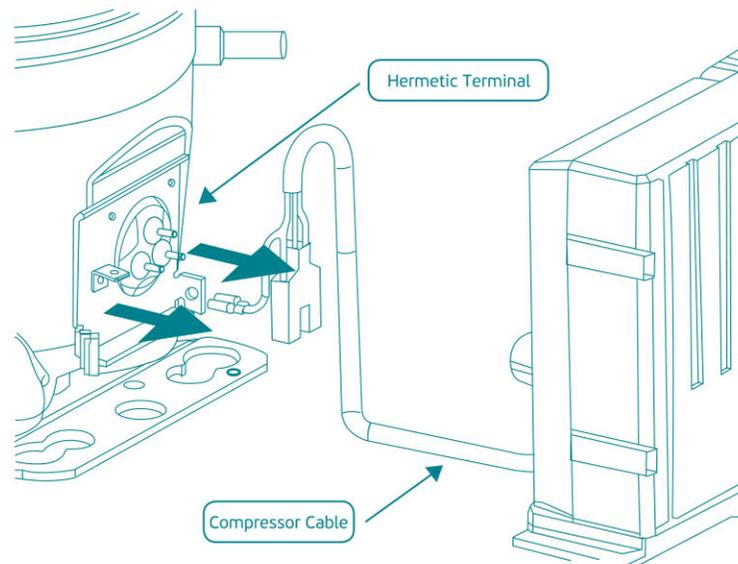

# 01 REPLACING A FAILED INVERTER

To replace the original inverter in the system, follow the steps:

1. Remove the Inverter plastic cover to have access to the electrical terminal;
2. Remove the power cable (1), the signal cable (2) and the grounding cable (3);

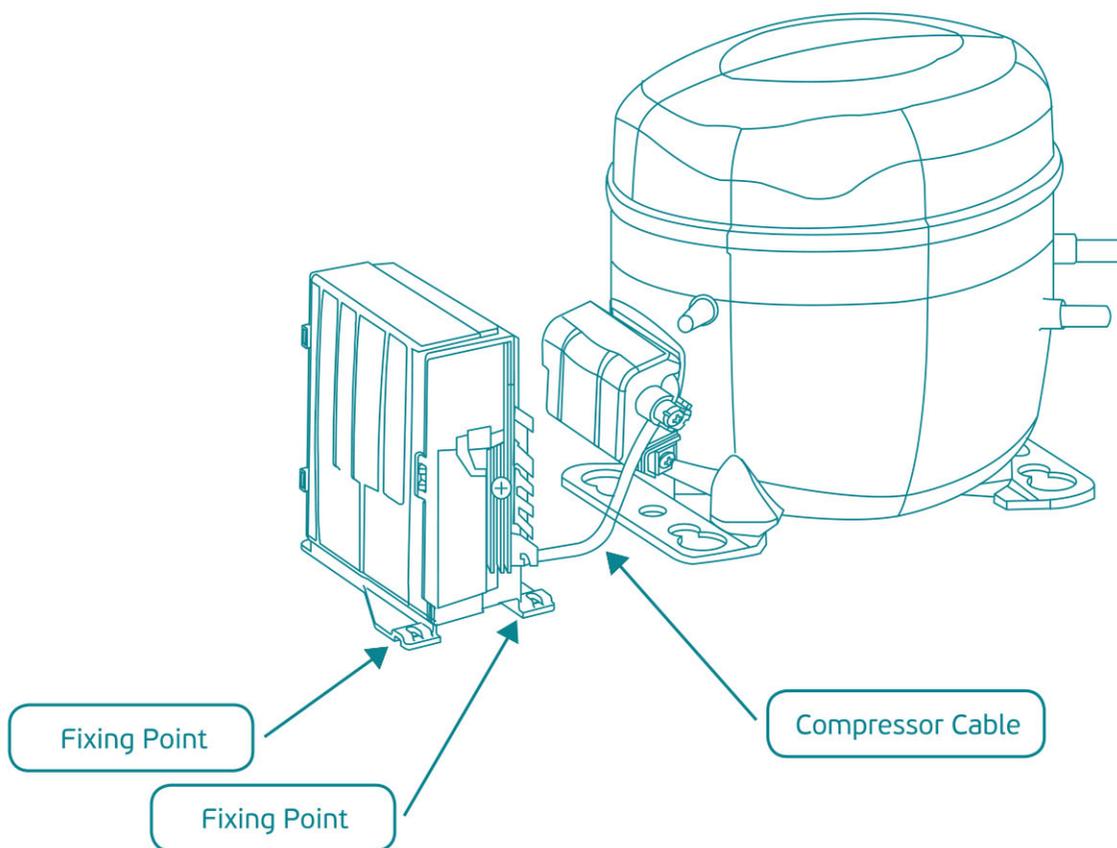

3. Disconnect the Inverter from the compressor;

4. Unscrew and remove the inverter from the system;

## 02 INSTALLING THE NEW INVERTER

1. Select the new inverter following the instructions shown above;
2. Fixate the Inverter on the system using the fixation points;

**Obs.:** If the original Inverter was mounted on the compressor, the new Inverter must be installed on the system to make sure that it doesn't move during the normal system usage.

## ELECTRICAL CONFIGURATIONS

### WIRING DIAGRAMS KEY

	OVERLOAD PROTECTOR		PTC START DEVICE*
	OVERLOAD PROTECTOR		INTEGRATED PTC DEVICE
	CURRENT START RELAY		CURRENT START RELAY WITH CAPACITOR CONNECTIONS
	3CR CURRENT START RELAY		3ARR3 START RELAY (VOLTAGE).
	RUN CAPACITOR		RUN CAPACITOR (MANDATORY - NOT SUPPLIED)
	OPTIONAL RUN CAPACITOR		START CAPACITOR
	FAN		PUSH BUTTON
	LAMP		SINGLE PHASE MOTOR
	3-PHASE MOTOR		THERMOSTAT
	LOW-HIGH PRESSURE SWITCH		PILOT CIRCUIT 24 OR 220 V
	EARTH CONNECTION		COMMON (INTERNAL OVERLOAD PROTECTOR)
	3-PHASE SUPPLY		START
	SINGLE PHASE SUPPLY		BROWN CABLE
	COMMON		BLACK CABLE
	RUN		RED CABLE
	TERMINAL BLOCK		CONNECTIONS TO BE MADE BY THE CUSTOMER (NOT SUPPLIED)
	WHITE CABLE		
	BLUE CABLE		
	YELLOW-GREEN CABLE		
	CONNECTIONS SUPPLIED

## RECOMMENDATIONS

### 1 - ELECTRICAL ACCESSORIES

Before removing the compressor plastic protection cover, check if the compressor is fully disconnected from the power source and if capacitors are applied.

Never operate on any electrical accessory with the compressor connected to the power grid. Working on an electrified compressor can cause severe damages to the technician's health, causing risks of electric shocks or getting burnt.

Start and/or run capacitors must be handled carefully, because, even when disconnected, they can cause electric shocks.

When you need to remove the capacitors, disconnect this components carefully paying attention to the exposed electric terminals. After disconnected, the capacitor must be discharged. Check if the capacitance ranges ( $\mu\text{F}$ ) printed on the label on the capacitors are in accordance with the compressor's technical data. The capacitor's voltage must be the same or higher than the specified value in the compressor's technical data. In case the capacitor or compressor's specification don't match, replace the capacitor.

The application of the wrong capacitor, not specified component, may cause overheating of these components. Overheating may cause fractures on the capacitor which can lead to the leakage of internal content burning the operator.

In the case of removing the electrical components from the compressor's hermetic terminal, first remove the overload protector and the start device (relay or PTC) applying longitudinal force on the terminal pins. Never apply transversal force on the pins of the hermetic terminal.

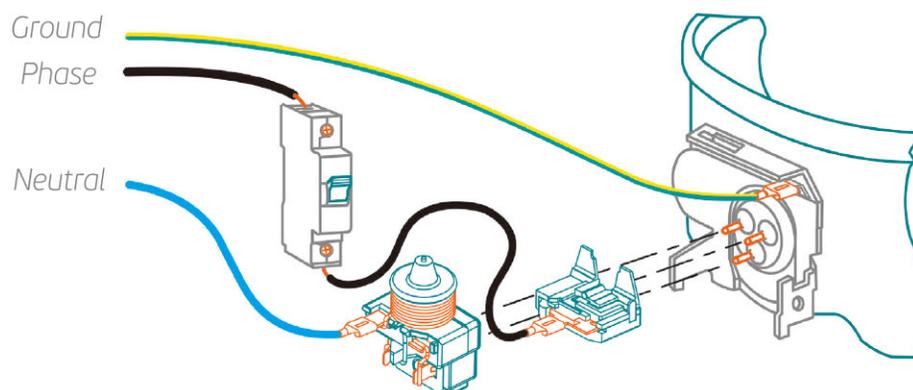

The incorrect removal of these accessories may damage the hermetic terminal on the compressor which can lead to the hermetic pins to be dislodged, causing refrigerant leakage. This situation becomes more critical in the case of flammable refrigerant utilization, since associated with an ignition source, creating a risk of and exposed flame with serious risks to the technician's physical integrity.

Cross check the code printed on the overload protector, relay or PTC with the compressor's technical data. In case they are different, replace these components for a compliant one. Universal accessories don't exist, you must always use components specified on the compressor's technical data.

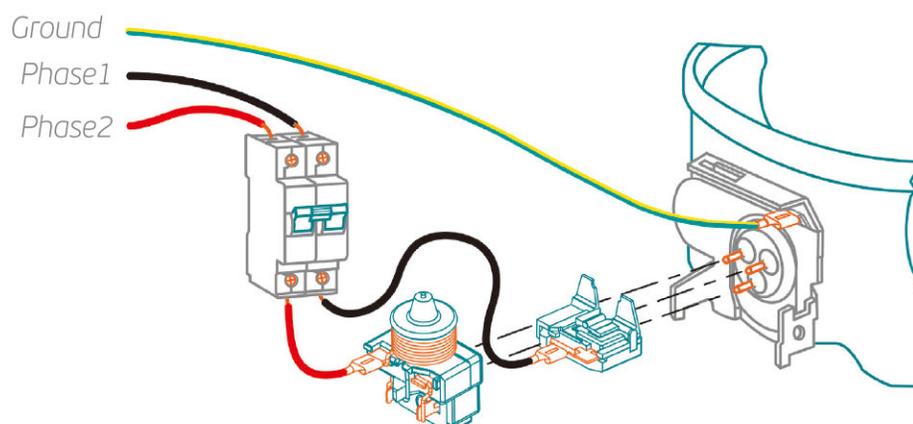

The use of incorrect electrical components, (overload protector, starting device) can cause a short circuit in the region the hermetic terminal of the compressor, which can lead to the hermetic pins to be dislodged, causing refrigerant leakage. This situation becomes more critical in the case of flammable refrigerant utilization, since associated with an ignition source, creating a risk of and exposed flame with serious risks to the technician's physical integrity.

## 1 - ELECTRICAL INSTALLATION

On single-phase installations, the phase wire must be protected by a circuit breaker and connected to the overload protector. The Neutral wire must be connected to the start device (Relay or PTC). The system must be grounded.

On two-phase installations, the use of a bipolar circuit breaker is mandatory, because in case of a short circuit, both phases will be protected. The system must be grounded.

When this bipolar starter isn't applied, the system is exposed to a short circuit in the region the hermetic terminal of the compressor, which can lead to the hermetic pins to be dislodged, causing refrigerant leakage. This situation becomes more critical in the case of flammable refrigerant utilization, since associated with an ignition source, creating a risk of and exposed flame with serious risks to the technician's physical integrity.

The usage of a not grounded system can generate severe risk of an electric shock on the technician.

## 2 - COMPRESSOR

If the compressor's replacement is necessary, be aware to these points below:

I. Check if the compressor is disconnected from the power grid.

You must never handle any electrical accessory with the compressor connected to the power grid. This can prevent several health risks to the technicians, such as electric shocks or getting burnt.

II. You must never remove the compressor without first removing all the refrigerant inside the system. You can use refrigerant recovery. In the case of replacing compressors with flammable refrigerants, such as R290 or R600a, make sure to remove the whole charge from the system.

The presence of flammable fluid residues can expose the technician to risks.

III. You must always use a pipe cutter to disconnect the pipes from the compressor. Under no circumstances, use the flame torch to disconnect the compressor tubes.

The use of a torch to disconnect the compressor from the system operating with flammable refrigerant can cause fire and release of toxic vapors.

IV. In case of compressor failure and / or internal contamination of the system, clean the refrigeration circuit with a suitable solvent, following the technical guidelines of the solvent manufacturer.

Failure to comply with the solvent manufacturer's technical guidelines may expose the technician to risk of fire or intoxication.

V. Before turning the compressor on:

- Check if the voltage specified on the compressor label in accordance with the power grid and system electrical installation, following item 1.1.

The application of a compressor with a wrong voltage can cause a short circuit in the region the hermetic terminal of the compressor, which can lead to the hermetic pins to be dislodged, causing refrigerant leakage. This situation becomes more critical in the case of flammable refrigerant utilization, since associated with an ignition source, creating a risk of an exposed flame with serious risks to the technician's physical integrity.

- Check if the electrical protection plastic cover is properly inserted.

Failure to use or improperly fix the plastic cover on the electrical terminal may expose the technician to risk of electric shock and fire.
